

I strongly support this proposal to make an exclusive CW segment on 160M. This should be done on all the HF Amateur bands to prevent the encroachment of wide band modes into these segments to allow for the continued enjoyment and use of Morse Code on the amateur bands. Despite efforts to destroy Morse Code on the amateur bands, many new hams are discovering this wonderful mode for the first time, and they need a place to practice and become proficient in its use. Exclusive CW segments on all the HF amateur bands would provide this place for them.
